Low Expansion Foam Branchpipes

The Angus series of low expansion foam branchpipes has been designed with long range performance in mind. There are three basic models with nominal foam solution throughputs of 225, 450 and 900 litres / mm at 7 bar. Selfinducing models are available in the 225 and 450 litre / minute versions,

All models produce finished foams of nominal expansion 10 : 1 and give foam streams of an exceptional range. To get the best results from these branchpipes we recommend use with either FP70 Plus Fluoroprotein foam or Alcolseal AR-FFFP multi-purpose foam concentrate
